Annual Summary

Annual Summary data shows a summary of the data arranged by UKBMS Weeks, and the dates shown are week-commencing ...
 Figures shown in red are (or include) estimates for missing weeks, based on a simple interpolation.
 Raw data will just show the counts exactly as entered. When looking at single sites in Raw data form, you can edit your counts by clicking on the sample link at the top of the column.

Hawkshill Common Floral Survey 2015

by Eddie Turner

Introduction

A major disappointment this year has been the apparent absence of Horseshoe Vetch; this is one of the important species we are trying to encourage. Also unseen this year was Columbine. Apart from these species, all the species we are encouraging on the West Bank have been observed. Also worth noting, for the first time Common Broomrape was observed. It is, however, worrying that invasive woody plants are continuing to spread on the sensitive West Bank area. Hopefully, by next year these plants, Sycamore, Hawthorn, Ash and Travellers' Joy, can be all but eradicated.
